

Languages: Python, TypeScript, JavaScript, Kotlin, Java, Swift, Bash, SQL, C, C++, Terraform.

Technologies: Linux, Docker, Kubernetes, NumPy, Pandas, PyTorch, AWS, React.js, Tensorflow, PostgreSQL, SKLearn, Git.

Experience

Amazon (Toronto, ON)

July 2025 - Present

Software Development Engineer I

Kotlin, Java, TypeScript, Python, AWS

- Leading the development of an agentic tool for the creation of sales campaigns, automating ad audience selection and product budget allocation, saving 1M+ man-hours spent on campaign planning per year for 5000+ sales executives.
- Implemented an automated LLM-based workflow to ingest advertiser contracts into Amazon's advertisement platform. Reduced delays in contract availability from months to 1 minute, and enabled instant tracking of advertiser spending.
- Optimized high-traffic APIs in Amazon's advertisement platform, reducing latency by 90% and on-call load by 30%.

University of Waterloo (Waterloo, ON)

January 2025 - December 2025

Undergraduate Research Assistant

Python, PyTorch, Huggingface, PostgreSQL

- Fine-tuning LLMs for metadata analysis and analyzing price trends to understand Solana blockchain trading activity.

BetterUp (San Francisco, CA)

September 2024 - December 2024

Machine Learning Engineering Intern

Python, Terraform, Kubernetes, AWS

- Developed an LLM-based transcript analysis pipeline using PyTorch, delivering 20+ tailored user progress insights to BetterUp's enterprise partners, and enabling BetterUp to increase its partner contract renewal rate.
- Added sensitive content guardrails to BetterUp's coaching chatbot, directing users to HR resources in 5k+ instances.
- Developed a pipeline to analyze user activity based on job title, enabling personalized progress insights for 1M+ users.

Amazon (Toronto, ON)

May 2024 - August 2024

Software Development Engineering Intern

Kotlin, Java, TypeScript, JavaScript, AWS, React.js

- Built an application enabling account executives to distribute sales leads Slack APIs with Amazon's advertising platform, automating lead distribution to managers and improving response times for 5000+ salespeople by 50%.
- Developed an LLM-powered natural language to database query converter, accelerating lead retrieval times by 10x.

University of Waterloo (Waterloo, ON)

January 2024 - April 2024

Undergraduate Research Assistant

Swift, CoreML

- Implemented an LLM test bench, enabling evaluation of 10+ LLMs for topic modelling of health science documents.

Qualcomm (Toronto, ON)

January 2023 - December 2023

Software Engineering Intern

C++, C, Python, Bash, Linux

- Led the development of an automated software profiling pipeline, enabling performance analysis of 20+ AI workloads running on Snapdragon, and revealing 100+ performance bottlenecks in Qualcomm's embedded software.
- Used a data-driven approach to reduce IPC latency by 50% for realtime computer vision tasks running on Snapdragon.
- Added configurable embedded debugging infrastructure, reducing troubleshooting time by 30% for 40+ engineers.

Cisco Systems (Ottawa, ON)

May 2022 - August 2022

DevOps and Analytics Intern

Python, Docker, Linux, SKLearn

- Built a recommendation system to automate code reviewer selection for pull requests. Deployed for 3600+ users.
- Optimized production Docker images by removing redundancies, reducing size by 90+% and saving \$35,000+/year.

Cisco Systems (Ottawa, ON)

May 2021 - August 2021

Software Engineering Intern

Python, SQL, TensorFlow

- Developed a recurrent neural network to automatically detect issues in routers by analyzing telemetry data.

Extracurriculars

Waterloo Data Science Club (Waterloo, ON)

September 2022 - September 2023

- Presented papers and workshops covering neural networks, image processing, and NLP to 100+ club members.

Education

University of Waterloo (Waterloo, ON)

September 2020- May 2025

Bachelor of Computer Science (Co-op) with AI Specialization

GPA: 87% (Dean's Honours)
